Go to the main contents of the Famous Full Color Review of the Basic Principles of Diseases and Blood Disorders - based on the Harvard Medical School Hematology course Doody's Core Title for 2020! LANGE Pathophysiology of Blood Diseases, The second edition is a well-illustrated, easy-to-assimilate introduction to the physiological principles underlying the regulation and function of blood cells and hemostasis, as well as the pathophysiological mechanisms responsible for the development of blood diseases. Thanks to its strong focus on key principles, the book also covers diagnosis and management primarily within pathogenesis. The organization and content of this book is based on a 3-week haematology course given to students in the second year of Harvard Medical School. All authors are lecturers in this course, and many of the figures have been taken directly or adapted from their lectures. FEATURES OF THE SECOND EDITION: New consolidated boxes of high-yield points to remember All figures have been redrawn by one artist for quality and consistency More convenient presentation Each chapter includes learning goals, and self-assessment questions with detailed explanations of numerous tables and charts to encapsulate important information hailed for its uniformity of style, clarity, brevity and high level of clinical rigor, LANGE The second edition will prove valuable to medical students as well as physicians at all stages of their training. The well-known full-color review of the fundamental principles of diseases and blood disorders is based on the hematology course of Harvard Medical School A Doody's Core Title for 2020! LANGE Pathophysiology of Blood Diseases. The second edition is a well-illustrated, easy-to-assimilate introduction to the physiological principles underlying the regulation and function of blood cells and hemostasis, as well as the pathophysiological mechanisms responsible for the development of blood diseases. Thanks to its strong focus on key principles, the book also covers diagnosis and management primarily within pathogenesis. The organization and content of this book is based on a 3-week haematology course given to students in the second year of Harvard Medical School. All authors are lecturers in this course, and many of the figures have been taken directly or adapted from their lectures. FEATURES OF THE SECOND EDITION: - New consolidated boxes with high yield points to remember - All figures have been redrawn by one artist for quality and consistency - more comfortable presentation - Each chapter includes learning goals, and self-assessment questions with detailed explanations - Numerous tables and diagrams encapsulate important information obtained for its uniformity of style, clarity, brevity and high level of clinical rigor, The second edition will prove medical students, as well as doctors at all stages of their training. Chapter 1. Introduction to the blood and hemathopoetic tissueChapter 2. HematopoiesisChapter 3. Review of anemiaChapter 4. Anemia due to bone marrow failure or infiltrationChapter 5. Iron homeostasis: Deficit and overloadChapter 6. Megaloblast anemiaChapter 7. Anemia associated with chronic diseaseChapter 8. ThalassemiaChapter 9. Sickle cell diseaseChapter 10. Hemolytic disorders of the red cell membrane and red cell metabolism11. Acquired hemolytic anemiaChapter 12. ErythrocytosisChapter 13. HemostasisChapter review 14. Platelets DisordersChapter 15. Inherited Coagulation DisordersChapter 16. Acquired DisordersChapter 17. Thrombotic disorders Chapter 18. The function of white blood cells and non-malignant white blood cells DisordersChapter 19. Introduction to hematological malignanciesChapter 20. Myeloproliferative disorders and myelodysplastic syndromes21. Acute leukemia22. Non-Hodgkin's lymphomas and chronic lymphocytic leukemia23. Hodgkin LymphomaChapter 24. Multiple myeloma and related disorders25. Blood transfusion26. Hemathopoetic stem cell transplantation pathophysiology of blood disorders 2nd edition pdf. pathophysiology of blood disorders 2nd edition
